

THE MAGIC OF MINERALIZING

**Perfectly planned and architecturally outstanding
projects are your business card.**

**Have them beautiful and protect your buildings
from moisture and environmental influences.**

10 years guarantee secured by AXA Insurances

WHAT IS MINERALIZATION?

With a single treatment, ProtecD infiltrates the surface and connects definitively and irreversibly with the minerals on a 100% organic basis.

Your objects are **protected permanently** against everything in the world that can penetrate the surface and cause harm, such as: moisture, salty air, frost, dirt, acids, liquids of all kinds, mushrooms and moss.
HORIZONTAL AND VERTICAL

The appearance of the minerals does not change and the minerals do not shine.

The treated surfaces become pressure- and acid-proof while continuing to breathe. The abrasion is slowed down and paints last 2 to 3 times longer.

WE WILL SHOW YOU SOME EXAMPLES...

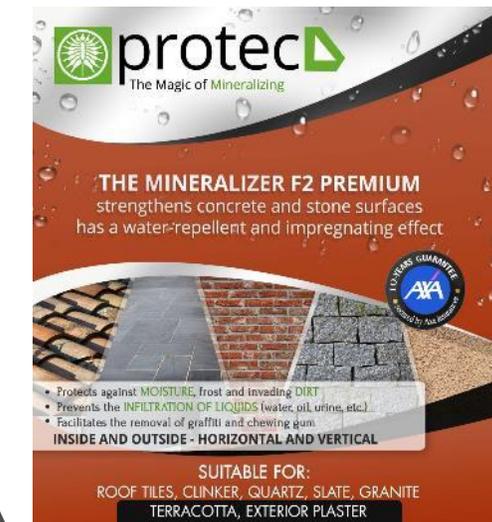

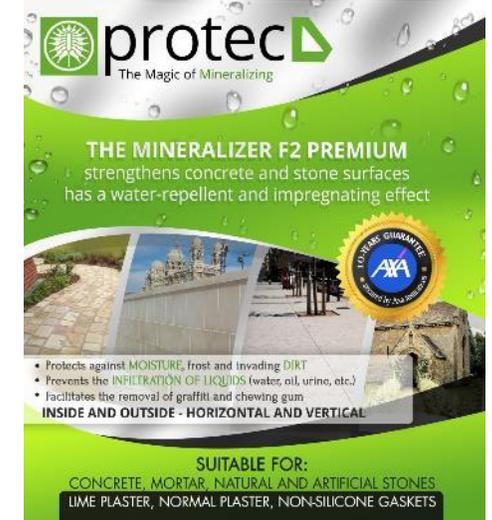

For permanent protection:

PREMIUM MINERALIZER

F2 and TF

Further description under PRODUCTS

For renovation and repair

Further description under PRODUCTS

ProtecD DK NET Intensive Cleaner
for a professional and thorough cleaning

- Removes dirt and residue after completion of construction site work
- Is particularly suitable for the preliminary cleaning of concrete floors of all kinds before painting and renovation
- Degreases and removes even stubborn stains such as oil and gasoline
- Removes dust

INSIDE AND OUTSIDE - HORIZONTAL AND VERTICAL

Areas of application are pedestrian zones, gas stations, parking lots and car parks, paved areas, industrial floors, warehouses etc.

Suitable for:
Natural and artificial Stones, Ceramics, concrete and Mortar, Facades,
Terracotta, Tiles, Slate, Fiber cement

PROTECD DM ALGAE AND MOOSE REMOVER
enables the removal of stubborn moss, algae, mold, fungi

- Removes moss, mold and fungus on roofs, floors and walls.
- Gets rid of fungi and algae in swimming pools and bathrooms.
- Your terraces and swimming pools shine like new.

INSIDE AND OUTSIDE - HORIZONTAL AND VERTICAL

PROTECD DM ALGAE AND MOOSE REMOVER is applicable to concrete, natural and artificial stone, terracotta, ceramic and facade plaster.

Important: ProtecD DM does not open the pores of the treated substrates.

PROTECD AKSTOP CH
Mineral water-repellent mortar

Suitable for:
Works on natural and artificial stones and all types of concrete
ProtecD Akstop CH is resistant to pressure and back pressure

... for the protection of concrete
outdoors

against moisture, dirt, moss..
HORIZONTAL and VERTICAL

...for the protection of concrete indoors
against penetrating dirt,
liquids and stains of every kind...

VERTICAL AND HORIZONTAL

...for the protection of your favorite projects
of natural and artificial stone outdoors...

against moisture, weather, dirt,
moss, graffiti

HORIZONTAL AND VERTICAL

Hotels and restaurants are our VIP customers

Treatment with ProtecD

- . makes cleaning easier
- . reduces abrasion
- . extends the durability of all concrete and stone surfaces
- . protects the restaurant and pool terraces from stains and penetrating liquids
- . protects the joints in the baths from fungal attack

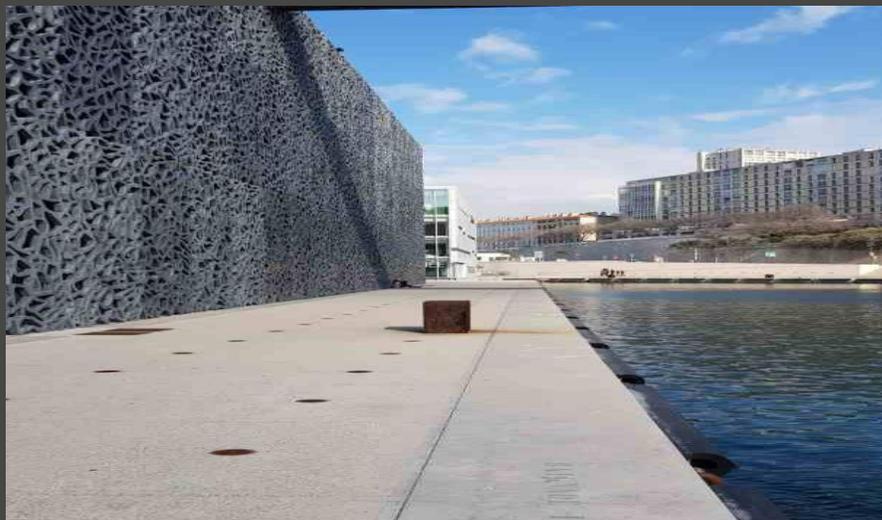

Especially for the protection of
clinker facades

... for the protection of pool areas...
HORIZONTAL AND VERTICAL

ProtecD also protects your terraces close to saltwater from aggressive influences (ingress of water, wind and sun).

Our project Quai des J4, Mu Cem, Marseille

Examples of damage to facades

Such damages from moisture, frost and salty air on house facades and walls can be avoided with the help of a protective treatment with ProtecD.

If the damages have already occurred, we can help you repair the facades and protect them for the future.

...for the protection of all natural and artificial stones outside...
against moisture, frost, environmental influences, stains,
chewing gum

... for the protection of barbecue
areas from oil and liquid stains...
VERTICAL and HORIZONTAL

protec
The Magic of Mineralizing

Special protection for porous natural stone
slabs and joints in the interior

HORIZONTAL UND VERTIKAL

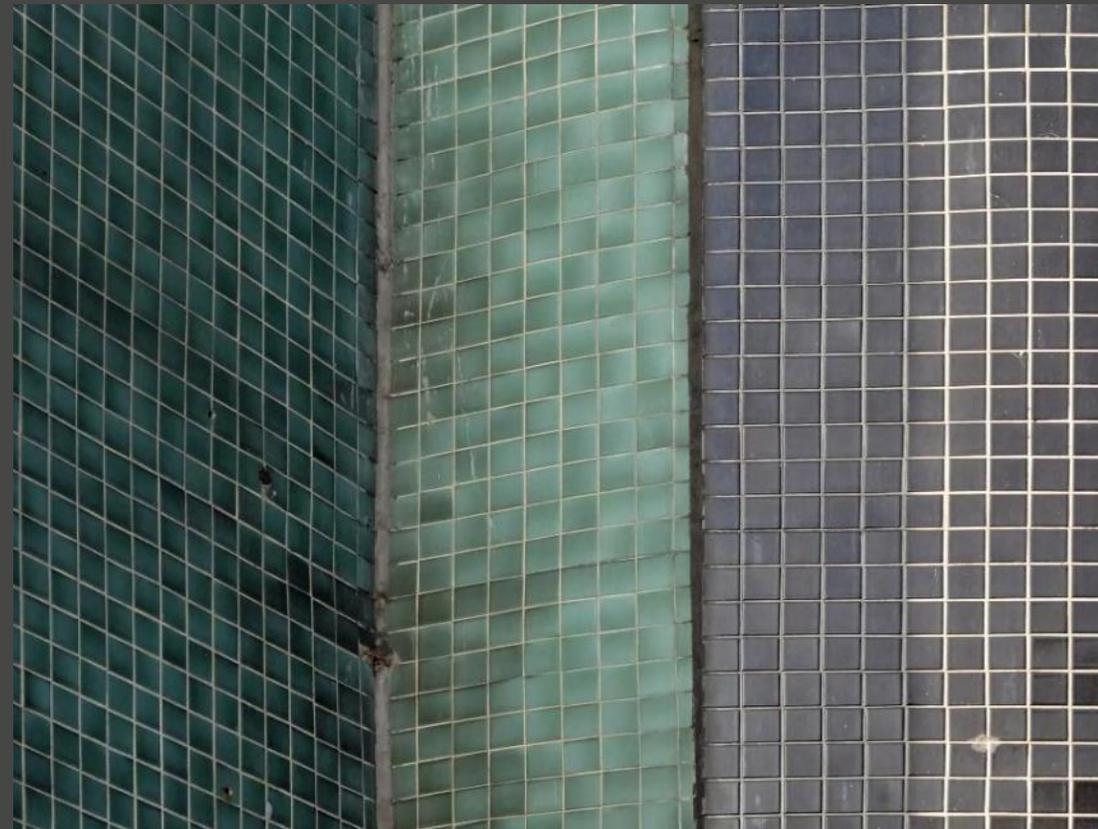

For the lining of pools, ponds and wells,
and for foundations

For the protection of joints

Protection of warehouses against the ingress of liquids and stains of every kind

Our reference project:
Entropot -
producer of regional food in
Provence,
South France

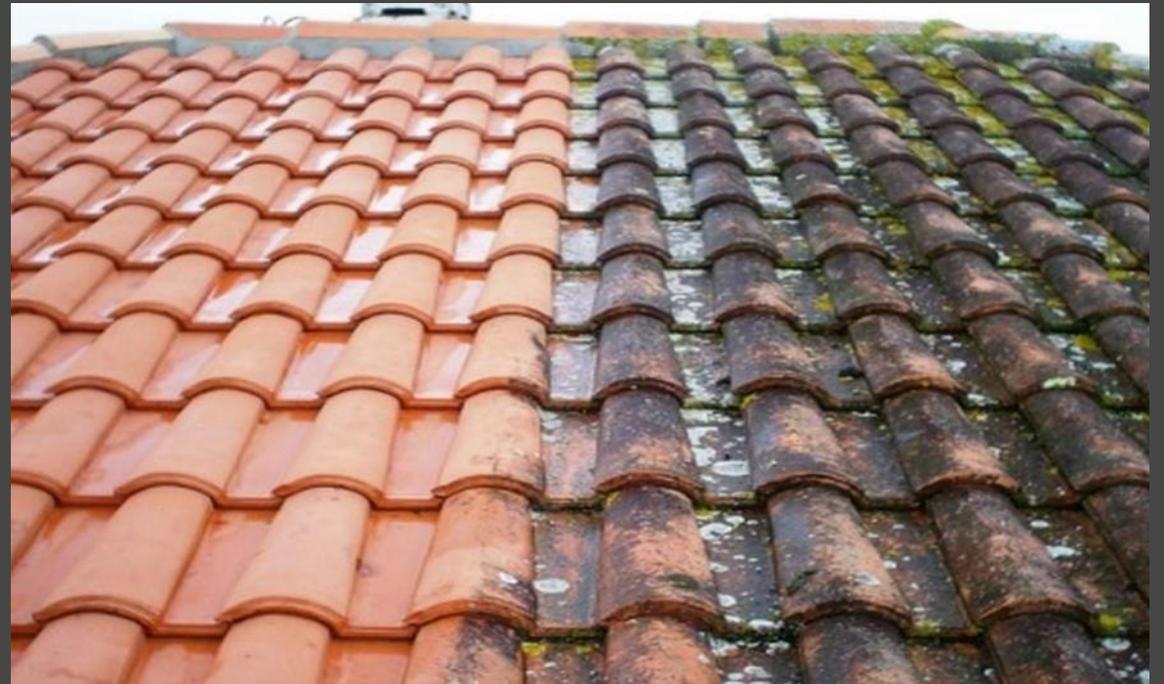

For protection against oil and gasoline seepage in parking lots and garages
See under REFERENCES our project BMW Testcenter, Istres

Examples:
Above: Parking places on the street
Right: Carpark

Protection of brick and slate roofs against moss

Examples of penetrating moisture and frost

Such water and frost damages can be avoided by using ProtecD.

If these damages have already occurred, we can help repair and protect your surfaces from moisture and frost in the future.

Protection against graffiti

Sprayed house facades and walls are popular objects of pseudo artists.

Protect these surfaces from concrete, natural and artificial stones, marble, clinker, quartz concrete or slate with ProtecD and graffiti will be easily removed.

Above and left: damage of moisture + graffiti

...for protection against dog urine and urinating in public

Dogs like to mark their territory on corners of houses and walls. Urinating in public is a bad issue; however, it's almost a sport in pub areas, staircases and parking garages.

When surfaces are protected with ProtecD, water on its own is enough to flush away the urine and its odor since urine cannot penetrate the walls and floor and settle there.

Our tip: Use ProtecD as primer!

- . the application by pressure spray is much faster
- . the applied colors last 2 - 3 times longer

Thank you for viewing these many options for protective treatment.

We are happy to treat a sample area selected by you so that you can convince yourself of using ProtecD.
