

THE MAGIC OF MINERALIZING

**Historic buildings of every kind have survived generations
and should have the chance to be there
many more centuries in order to inspire our posterity.**

10 years guarantee secured by AXA Insurances

WHAT IS MINERALIZATION?

With a single treatment, ProtecD infiltrates the surface and connects definitively and irreversibly with the minerals on a 100% organic basis.

Your objects are **protected permanently** against everything in the world that can penetrate the surface and cause harm, such as: moisture, salty air, frost, dirt, acids, liquids of all kinds, mushrooms and moss.
HORIZONTAL AND VERTICAL

The appearance of the minerals does not change and the minerals do not shine.

The treated surfaces become pressure- and acid-proof while continuing to breathe. The abrasion is slowed down and paints last 2 to 3 times longer.

WE WILL SHOW YOU SOME EXAMPLES

For permanent protection :

PREMIUM MINERALIZER

F2 and TF

Further description under PRODUCTS

For renovation and repair

Further description under PRODUCTS

ProtecD DK NET Intensivreiniger

für eine professionelle, gründliche Reinigung

- Beseitigt Schmutz und Rückstände nach Beendigung der Baustellenarbeiten
- Eignet sich besonders zur vorbereitenden Reinigung von Betonböden aller Art vor dem Streichen und Renovieren

Arbeiten an Natur- und Kunststeinen und allen Arten von Beton
ProtecD Akstop CH ist widerstandsfähig gegen Druck und Gegendruck

... after renovation and protection
against moisture, frost,
and weathering ...

Built around 1800

Built around 1740

Built around 1900

... for the preservation of listed
villas

... for the renovation and
preservation of historical buildings

... to protect the walls and floors
of old vaulted cellars from dirt
and the ingress of liquids
- especially suitable for wineries and restaurants -

Protection against graffiti

Pseudo artists deface historic buildings and statues. Graffiti is very difficult to remove and often the mineral substrate suffers from the necessary very intensive cleaning.

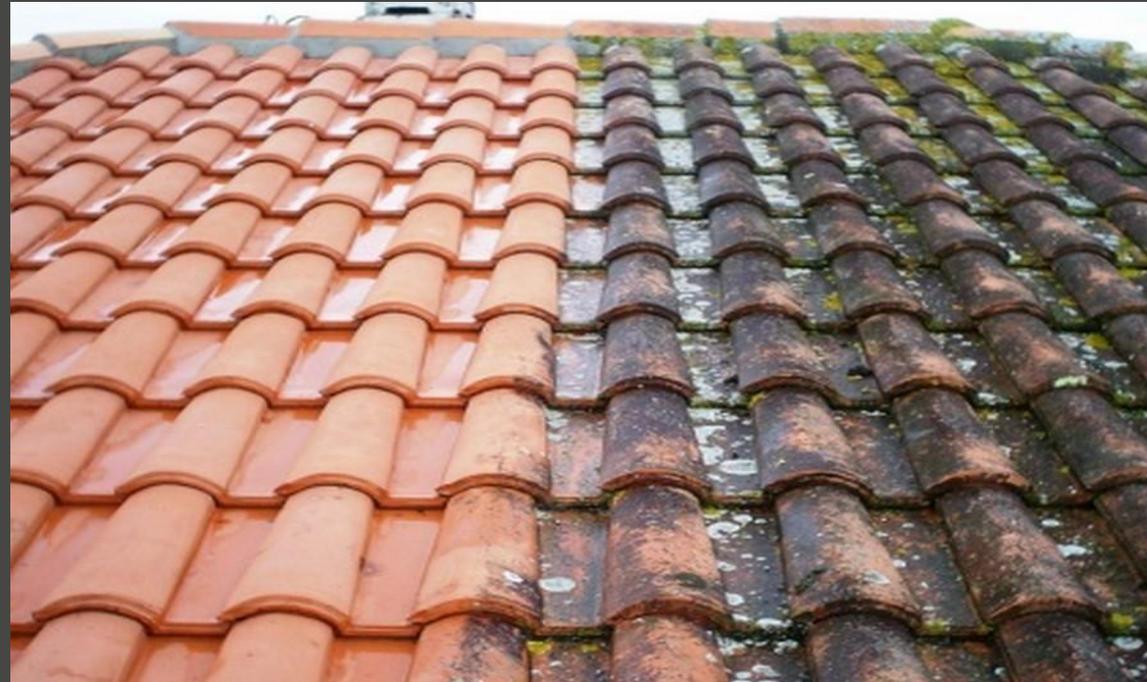

Protecting the surface with ProtecD – and that is permanent - prevents the paint from penetrating the minerals, making it easy to remove.

For the removal and subsequent permanent protection against algae and moss

Protection of brick and slate roofs against moss

...for protection against dog urine and urinating in public

Dogs like to mark their territory on corners of houses and walls.
Urinating in public is a bad issue, even historic buildings are not safe.

When surfaces are protected with ProtecD, water on its own is enough to flush away the urine and its odor since urine cannot penetrate the walls and floor and settle there.

Our tip: Use ProtecD as primer!

- , the application by pressure spray is much faster
- , the applied colors last 2 - 3 times longer

Thank you for viewing these many options for protective treatment.

We are happy to treat a sample area selected by you so that you can convince yourself of using ProtecD.
