

THE MAGIC OF MINERALIZING

You love your house, your garden and your terrace.

**Get the beauty of your home and
protect it for life with a one-time treatment
from moisture, frost, dirt and pollution.**

10 years guarantee secured by AXA Insurances

WHAT IS MINERALIZATION?

With a single treatment, ProtecD infiltrates the surface and connects definitively and irreversibly with the minerals on a 100% organic basis.

Your objects are **protected permanently** against everything in the world that can penetrate the surface and cause harm, such as: moisture, salty air, frost, dirt, acids, liquids of all kinds, mushrooms and moss.
HORIZONTAL AND VERTICAL

The appearance of the minerals does not change and the minerals do not shine.

The treated surfaces become pressure- and acid-proof while continuing to breathe. The abrasion is slowed down and paints last 2 to 3 times longer.

WE WILL SHOW YOU SOME EXAMPLES...

For permanent protection:

PREMIUM MINERALIZER

F2 and TF

Further description under PRODUCTS

protec

... as protection against oil and gasoline seepage in parking lots, car parks and garages ...

Above: parking place with oil spots

Examples of moss infestation on roofs
(before and after cleaning)
For rooftops protected with ProtecD TF Premium, the moss
problem is solved - permanently

Examples of damage of moisture GROUND EXTERIOR

Such water and frost damages can be avoided by using ProtecD.

If these damages have already occurred, we can help repair and protect your surfaces from moisture and frost in the future.

Cleaning and subsequent protection with ProtecD

You can do your own cleaning and later apply Premium Mineralizer F2 or TF yourself.
We explain to you how it is done.

Or ask us about one of our subcontractors in your area.

Examples of damage to facades

Such damages from moisture, frost and salty air on house facades and walls can be avoided with the help of a protective treatment with ProtecD.

If the damages have already occurred, we can help you repair the facades and protect them for the future.

Protection of the basement walls against humidity

Supporting draining and preventing fungal infestation

Protection against graffiti

Sprayed house facades and walls are popular objects of pseudo artists.

Protect these surfaces from concrete, natural and artificial stones, marble, clinker, quartz concrete or slate with ProtecD and graffiti will be easily removed.

Above and left: damage of moisture + graffiti
(avoidable in case of an early treatment)

...for protection against dog urine and urinating in public

Dogs like to mark their territory on corners of houses and walls. Urinating in public is a bad issue; however, it's almost a sport in pub areas, staircases and parking garages.

When surfaces are protected with ProtecD, water on its own is enough to flush away the urine and its odor since urine cannot penetrate the walls and floor and settle there.

Our tip: Use ProtecD as primer!

- . the application by pressure spray is much faster
- . the applied colors last 2 - 3 times longer

Thank you for viewing these many options for protective treatment.

We are happy to treat a sample area selected by you so that you can convince yourself of using ProtecD.
